DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-3,13,14,21-23 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bohm (USPN 6,520,104) in view of McGarvey (USPN 4,989,750), Dodson (USPN 5,960,981) and Legare (USPN 6,686,003). Bohm clearly shows a base tank for storing flammable and combustible liquids and supporting a generator (fig 1), Bohm also shows an interstitial space defined between the walls of the outer tank and the inner tank (fig 5).

Bohm lacks a plurality of planar baffles coupling opposing side walls, Bohm also lacks fire resistant material disposed on the outside of outer tank, Bohm also lacks a fire resistant solution disposed in the interstitial space wherein the fire resistant solution remains liuid and is removable form said interstitial space in liquid form.

Dodson teaches a tank baffle aiding in the structural strength of a vehicle tank.

McGarvey teaches fire resistant material disposed on the outside of outer tank to improve safety 243. McGarvey also teaches fire resistant solution disposed in the interstitial space for improved safety 221a,221b,221c. Fire resistant solution is injected in liquid form then solidifies. Legare teaches a liquid fire resistant solution of water glass and a hydrated salt (high temperature silicate gel)(46) that remains liquid and is

removable in liquid form, Legare uses this gel over foam to keep contents of container below 125 degrees F during a fire in order to keep contents inside form burning (col. 1 ln. 20-30). All of the above prior art references are from the same field of endeavor being high performance fire resistant containers.

Therefore it would have been obvious to one of ordinary skill at the time of the invention was made to add Dodson's baffles to Bohm's tank to in order to increase structural strength. Also, it would have been obvious to one of ordinary skill at the time of the invention was made to add Mcgarvey's fire resistant material on the outside of outer tank and to add Legare's fire resistant solution in the interstitial space to lower the risk of fire or an explosion.

3. With respect to claims 2,3,22,23 McGarvey discloses steel walls that are about 10 gauge (1/8-1/4 in thick) (Col 2 In 60-65). That would include inner tank wall of at least about ¼ inch and an outer wall thickness of at least about ¼ inch. In regards to the 316 stainless steel.

It has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

It was well know in the art that 316 stainless steel has good corrosion resistance, workability and great strength. Therefore it would have been obvious to one of ordinary skill at the time of the invention was made to modify Bohm's tank with the stainless steel walls of McGarvey in order to have a strong corrosion resistant tank.

4. Regarding claims 13 and 33, McGarvey teaches glass fiber walls, are reinforced walls, resin impregnated. He teaches fiberglass walls for lightweight tank construction

Art Unit: 3727

(col2 ln60-64). Therefor it would have been obvious to one of ordinary skill in the art at the time of the invention to add a fiber glass mesh coated with an intumescent paint to Bohm's tank to lower the overall weight of the container in order to improve portability.

- 5. Regarding claim 14, McGarvey teaches fire resistant material disposed on the outside of outer tank to improve safety. Examiner views this material same as THERMOLAG 3000.
- 6. Claims 12,32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bohm, McGarvey and Dodson as applied to claim 1 above, and further in view of Neuscheler (USPN 3,995,168). Bohm as applied in claim one teaches everything except a water detector. Neuscheler teaches a devise to provide a warning signal when an unexpected fluid is present in the tank thereby protecting against situation where water is inadvertently placed or accumulates above a normal amount in an engine fuel tank (col1 ln58-63). Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to add a water detector such as Neuscheler to Bohm's tank in order to avoid running water contaminated fuel in the accompanying engine.

Allowable Subject Matter

- 7. Claims 4,5,7.9-11,24-25,27,29-31 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 8. Claims 15-17 and 20 are allowed.

Page 5

Response to Arguments

9. Applicant's arguments with respect to claims 1-3,13,14,21-23 and 33 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shawn M. Braden whose telephone number is (571)272-8026. The examiner can normally be reached on Mon-Thurs 8-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Newhouse can be reached on 571 272-4544. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
